

Here we have to see how to convert (or) current webpage as pdf file. We already discuss the thing about conversion of webpage as MS-Word document file. Similar to this we have to convert current webpage as pdf on current webpage itself. Most of the websites willing to provide their document as pdf instead MS-Word because in pdf the data can't be changed by user. From this information from pdf is unique. So most of website add a link to download as pdf. Let see how it can developed in php. For designing and import content of webpages we have include the coding of pdf toolkit here. Download the pdf creator [html2fpdf](#) add extract the files and add few files in the [html2fpdf](#) folder. The download link for pdf creator toolkit is [html2fpdf](#)
